

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class RayTracer_Display_IDisplayModule_EventFailed["RayTracer::Display::IDisplayModule::EventFailed"]
    RayTracer_Display_IDisplayModule_EventFailed --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a box for the `std::exception` class, which is divided into three horizontal sections. The top section contains the text `std::exception`, while the two sections below it are empty. Below this box is a blue arrow pointing upwards, with a hollow triangle head, indicating inheritance. The arrow originates from a larger box at the bottom. This bottom box is divided into three horizontal sections. The top section contains the text `RayTracer::Display::IDisplayModule::EventFailed`. The middle section contains the text `- _error`. The bottom section contains the text `+ EventFailed()` and `+ what()`.

RayTracer::Display
::IDisplayModule::EventFailed

- _error

+ EventFailed()
+ what()
